

LiyiTouch Monitor Extension tool

This tool is applied for monitor extension mode. You can specify the partition types. There are three types, including “horizontal type”, “vertical type” and “parallel type” of monitor extension. This program is only for *win2k/xp*.

***All of below parameter will take effect when you re-calibrated all touch panels.**

- **DISPLAY** – You must specify which display numbers you want to partition. You can only select number 1-4 by up-down scroll. Default is zero.
- **TYPE** – Specify what type you want to apply. There are only three types:

- **PARTITIONS** –You must specify how many areas you want to partition. You can partition the partition display into 2, 3, or 4 areas. You can only select number 1-4 by up-down scroll. Default is zero.

EXAMPLE

Like above map, we want to partition display1 into Type1 and 2 areas
